1. Applicant's election without traverse of Group I, claims 1-4, 11, and 12 in the reply filed on 20 May 2008 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In line 1 of claim 1, "the product" lacks positive antecedent basis as it has not been previously recited.

Claim 11 is indefinite as it is a product claim dependent upon a method claim and thus, the metes and bounds of the claim cannot be determined.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Whiting et al. (US 5,543,057).

Whiting et al. teaches a process for the isolation of a product (inorganic salts) from a supercritical process wherein the product is isolated as a non-supercritical suspension. See col.5, line 29 to col.6, line 63. The invention of Whiting et al. includes a means **16** for introduction of a non-supercritical fluid into a particle formation vessel **36** and a collection vessel **40** having a temperature control means (col.6, lines 12-15). In addition, pump means **14** controls the pressure within the entire system, and thus would control the pressure within vessel **40**. See col.4, lines 44-45. A particle storage means introduces a reactant in the form of a 'powder'.
